Update deployment

This document outlines the process of updating the build on the web server.

Prerequisites

- "Build and deployment" and its preqrequisites

Update deployment

1. Navigate to the deployment folder from "Build and deployment"

e.g. `cd Figshare-Data-Visualizer/deployment`

2. Run `./update_deployment "path to private key" ec2-user@"ip address of server"`

This updates the application to the latest version. It might require you to enter some credentials.
